

- ## Organization Strategy and Project Selection

Strategic Management Process (cont')

● Four of Activities of the Strategic Management Process

1. Review and define the organizational mission.
2. Set long-range goals and objectives.
3. Analyze and formulate strategies to reach objectives.
4. Implement strategies through projects

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-4

The Strategic Management Process: An Overview

● Strategic Management

- ✓ Provides the theme and focus of the future direction for the firm.
 - Responding to changes in the external environment—environmental scanning
 - Allocating scarce resources of the firm to improve its competitive position—internal responses to new action programs
- ✓ Requires strong links among mission, goals, objectives, strategy, and implementation.

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-5

Why Project Managers Need to Understand the Strategic Management Process

● Changes in the organization's mission and strategy

- ✓ Project managers must respond to changes with appropriate decisions about future projects and adjustments to current projects.
- ✓ Project managers who understand their organization's strategy can become effective advocates of projects aligned with the firm's mission.

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-6

Characteristics of Objectives

- S Specific** Be specific in targeting an objective
- M Measurable** Establish a measurable indicator(s) of progress
- A Assignable** Make the objective assignable to one person for completion
- R Realistic** State what can realistically be done with available resources
- T Time related**

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-7

Characteristics of Objectives

- S Specific** Be specific in targeting an objective
- M Measurable** Establish a measurable indicator(s) of progress
- A Assignable** Make the objective assignable to one person for completion
- R Realistic** State what can realistically be done with available resources
- T Time related**

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-8

Project Portfolio Management Problems

- **The Implementation Gap**
 - ✓ The lack of understanding and consensus on strategy among top management and middle-level (functional) managers who independently implement the strategy.
- **Organization Politics**
 - ✓ Project selection is based on the persuasiveness and power of people advocating the projects.
- **Resource Conflicts and Multitasking**
 - ✓ The multiproject environment creates interdependency relationships of shared resources which results in the starting, stopping, and restarting projects.

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-9

Benefits of Project Portfolio Management

- Builds discipline into project selection process.
- Links project selection to strategic metrics.
- Prioritizes project proposals across a common set of criteria, rather than on politics or emotion.
- Allocates resources to projects that align with strategic direction.
- Balances risk across all projects.
- Justifies killing projects that do not support organization strategy.
- Improves communication and supports agreement on project goals.

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-10

Portfolio of Projects by Type

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-11

Internal projects
External projects
R&D projects

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-12

Project Categories and Criteria

- Derivative projects
- Platform projects
- Breakthrough projects
- R&D projects

Matrix of aggregate project plan, based on product changes or process changes/innovation.

(Wheelwright and Clark-1992)

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-13

Innovation and Project Management

Low-Tech Project: No new technologies.

May apply experiences

May use PERT method

Medium-Tech Project

Is technology a competitive factor?

No→: find a better technology

Yes→: develop a new technology

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-14

Innovation and Project Management (Con't)

- **High – Tech Project:** system integration by module
Each module must be tested before integration.

- **Super – high – tech Project** : chain of "Go/No Go" decisions

Time for termination: not known!

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-15

A Portfolio Management System

● Selection Criteria

- ✓ Financial: payback, net present value (NPV), internal rate of return (IRR)
- ✓ Non-financial: projects of strategic importance to the firm.

● Multi-Weighted Scoring Models

- ✓ Use several weighted selection criteria to evaluate project proposals.

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-16

Financial Models

● The Payback Model

- ✓ Measures the time it will take to recover the project investment.
- ✓ Shorter paybacks are more desirable.
- ✓ Emphasizes cash flows, a key factor in business.
- ✓ Limitations of payback:
 - Ignores the time value of money.
 - Assumes cash inflows for the investment period (and not beyond).
 - Does not consider profitability.

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-17

Financial Models (cont'd)

● The Net Present Value (NPV) model

- ✓ Uses management's minimum desired rate-of-return (discount rate) to compute the present value of all net cash inflows.
 - Positive NPV: the project meets the minimum desired rate of return and is eligible for further consideration.
 - Negative NPV: project is rejected.

$$\text{Project NPV} = I_0 + \sum_{i=1}^n \frac{F_i}{(1+k)^i} \quad \text{where}$$

I_0 = Initial investment (since it is an outflow, the number will be negative)

F_i = net cash inflow for period i

k = required rate of return

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-18

Net Present Value (NPV) and Internal Rate of Return (IRR): Example Comparing Two Projects

Project A	Year 1	Year 2	Year 3	Year 4	Year 5	Total	Formulas							
Required Rate of Return	20%													
Outflows	(\$700,000)					(\$700,000)								
Inflows	\$225,000	\$225,000	\$225,000	\$225,000	\$225,000	\$1,125,000	Project A: =NPV(B6,C6:G6)							
Net Inflows	(\$475,000)	\$225,000	\$225,000	\$225,000	\$225,000	\$425,000								
NPV	\$89,554													
Project B	Year 1	Year 2	Year 3	Year 4	Year 5	Total								
Required Rate of Return	20%													
Outflows	(\$400,000)					(\$400,000)								
Cash Inflows	\$110,000	\$110,000	\$110,000	\$110,000	\$110,000	\$550,000	Project B: =NPV(B14,C14:G14)							
Net Inflows	(\$290,000)	\$110,000	\$110,000	\$110,000	\$110,000	\$150,000								
NPV	-\$4,366													
NPV comparison: Accept Project A—NPV is positive Reject Project B—NPV is negative														
Payback Method														
Project A	Project B													
Investment	\$700,000					Project A Payback: =(C32/C33)								
Annual Savings	\$225,000					Project B Payback: =(E32/E33)								
Payback Period*	3.1 years													
Rate of Return*	32.1%					Project A: =(C33/C32) Project B: =(E33/E32)								
Project A: Accept, less than 5 years and exceeds 20% desired rate														
Project B: Accept, less than 5 years														

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-19

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-19

Project Screening Matrix									
Criteria Weight	Stay within core competencies		Strategic fit		Urgency		25% of sales from new products		Weighted total
	2.0	3.0	2.0	2.5	1.0	1.0	3.0		
Project 1	1	8	2	6	0	6	5	66	
Project 2	3	3	2	0	0	5	1	27	
Project 3	9	5	2	0	2	2	5	56	
Project 4	3	0	10	0	0	6	0	32	
Project 5	1	10	5	10	0	8	9	102	
Project 6	6	5	0	2	0	2	7	55	
...									
Project n	5	5	7	0	10	10	8	83	

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-20

The Scoring Model												
Criteria												
	FAST			SAFE			COMFORTABLE			PRICE		Σ
	3	2	1	3	2	1	3	2	1	3	2	1
A		X		X			X				X	10
B		X			X			X				6
C	X					X		X			X	8

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-21

Polygon Model

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-22

Performance/Cost model

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-23

The Weighted Scoring Model

$$S_i = \sum_{j=1}^n s_{ij} w_j$$

where

S_i = the total score of the i^{th} project

s_{ij} = the score of the i^{th} project on the j^{th} criterion

w_j = the weight or importance of the j^{th} criterion

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-24

The Weighted Scoring Model

	Weighted Criteria												
	FAST (0.6)			SAFE (0.1)			COMFORTABLE (0.1)			PRICE (0.2)			Σ
	3	2	1	3	2	1	3	2	1	3	2	1	
A		X		X			X				X		2.2
B		X			X				X			X	1.7
C	X					X		X			X		2.3

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-25

Collective Utility (CU)

Weight	Alt. Goal	A ₁	A ₂	--	A _i	--	A _m
α_1	Z ₁	Z ₁₁	Z ₂₁	--	Z _{i1}	--	Z _{m1}
α_2	Z ₂	Z ₁₂	Z ₂₂	--	Z _{i2}	--	Z _{m2}
--	--	--	--	--	--	--	--
α_j	Z _j	Z _{1j}	Z _{2j}	--	Z _{ij}	--	Z _{mj}
--	--	--	--	--	--	--	--
α_n	Z _n	Z _{1n}	Z _{2n}	--	Z _{in}	--	Z _{mn}
	CU	CU ₁	CU ₂	--	CU _i	--	CU _m

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-26

Collective Utility (CU)

- Step 1: Transform from Z_{ij} to b_{ij}
- Step 2: Identify weights (importance proportion) for each criteria
- Step 3: Calculate Collective Utility Index for each opportunity
- Step 4: Choose the opportunity with CU-Max

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-27

Collective Utility (CU)

Standardizing:

→ No-dimension

→ Varying on [0,1]

$$b_{ij} = (Z_{ij} - Z_{min}) / (Z_{max} - Z_{min})$$

$$\text{Max } CU_i = \text{Max} \sum_{j=1}^n b_{ij} w_j$$

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-28

Compromise model

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-29

Compromise model

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-30

Compromise model

Euclidean distance
$$\text{Min } L_i = \left[\sum_{j=1}^2 (Z_{ijQ} - Z_{ij})^2 \right]^{\frac{1}{2}}$$

Standardization distance
$$\text{Min } L_i = \left[\sum_{j=1}^2 \left\{ \frac{|Z_{ijQ} - Z_{ij}|}{|Z_{j\max} - Z_{j\min}|} \right\}^2 \right]^{\frac{1}{2}}$$

Standardization distance with weighting scores
$$\text{Min } L_i = \left[\sum_{j=1}^2 \left\{ \frac{|Z_{ijQ} - Z_{ij}| \times \alpha_j}{|Z_{j\max} - Z_{j\min}|} \right\}^2 \right]^{\frac{1}{2}}$$

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-31

Nonnumeric Selection Methods

- The Sacred Cow- Special pet project advocated by President or Supervising Manager of Firm.
- The Operating/Competitive Necessity
- Comparative Benefits

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-32

The Q-Sort Method

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-33

Electre MODEL

2-34

Applying a Selection Model

● Project Classification

- ✓ Deciding how well a strategic or operations project fits the organization's strategy.

● Selecting a Model

- ✓ Applying a weighted scoring model to bring projects to closer with the organization's strategic goals.
- Reduces the number of wasteful projects
- Helps identify proper goals for projects
- Helps everyone involved understand how and why a project is selected

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-35

Project Proposals

● Sources and Solicitation of Project Proposals

- ✓ Within the organization
- ✓ Request for proposal (RFP) from external sources (contractors and vendors)

● Ranking Proposals and Selection of Projects

- ✓ Prioritizing requires discipline, accountability, responsibility, constraints, reduced flexibility, and loss of power.

● Managing the Portfolio

- ✓ Senior management input
- ✓ The priority team (project office) responsibilities

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

Date _____ Number _____

Project Title _____

Responsible Manager _____ Project Manager _____

☐ General support ☐ Quality ☐ Legal ☐ New product
☐ ☐ Cost reduction ☐ Replacement ☐ Capacity

YES ☐ NO ☐ The project will take more than 100 labor hours?
YES ☐ NO ☐ The project is a one-time effort? (will not occur on a regular basis)
YES ☐ NO ☐ The project proposal was reviewed by the product manager?

Problem definition

Describe the problem/opportunity.

Goal definition

Describe the project goal.

Objective definition

Performance: Quantify the savings/benefits you expect from the project.

Cost: Labor hours, materials, methods, equipment?

Schedule: Overall duration in months.

Major Project Proposal

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-37

What are the three major risks for this project?

1. _____

2. _____

3. _____

What is the probability of the above risks occurring?

0 to 1.0 none high

Risk 1 above
Risk 2 above
Risk 3 above

What is the impact on project success if these risks do occur?

0 to 10 none high

Risk 1 above
Risk 2 above
Risk 3 above

Resources available? _____ Yes _____ No

Current project status

Start date _____ Estimated finish date _____

Status: ☐ Active ☐ On hold

Update: _____

Priority team action:

☐ Accepted ☐ Returned

☐ Discovery—project not defined ☐ Duplicate to _____
☐ Operational—proposal not a project Project # _____
☐ Need more information—to prioritize project ☐ Completed project

Risk Analysis

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

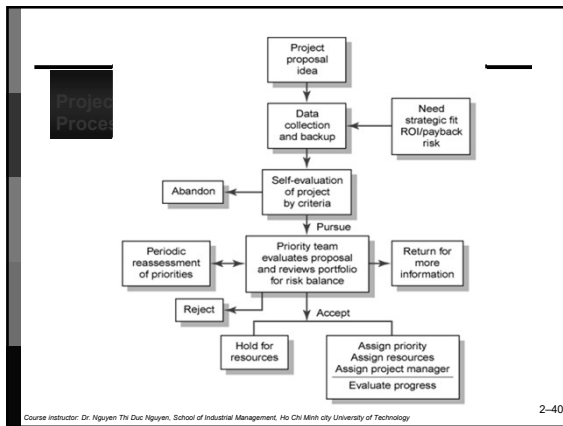

2-38

Managing the Portfolio

- Senior Management Input
 - ✓ Provide guidance in selecting criteria that are aligned with the organization's goals
 - ✓ Decide how to balance available resources among current projects
- The Priority Team Responsibilities
 - ✓ Publish the priority of every project
 - ✓ Ensure that the project selection process is open and free of power politics.
 - ✓ Reassess the organization's goals and priorities
 - ✓ Evaluate the progress of current projects

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh city University of Technology

2-39

Priority Analysis

		Project number			
		-26	27	28	29
Must objectives	Must meet if impacts				
All activities meet current legal, safety, and environmental standards	Yes-Meets objective No-Does not meet obj N/A-No impact	n/a			
All new products will have a complete market analysis	Yes-Meets objective No-Does not meet obj N/A-No impact	yes			
Want objectives	Single project impact definitions	Weighted score	Weighted score	Weighted score	Weighted score
Provides immediate response to field problems (10)	0 ≤ Does not address 1 = Opportunity to fix 2 = Urgent problem	99			
Create \$5 million in new sales by 200x (15)	0 ≤ \$100,000 1 = \$100,000-500,000 2 = > \$500,000	0			
Improve external customer service (10)	0 ≤ Minor impact 1 = Significant impact 2 = Major impact	166			
Total weighted score					
Priority					

FIGURE 2.6

2-41

Project Portfolio Matrix Dimensions

- **Bread-and-butter projects**
 - ✓ Involve evolutionary improvements to current products and services.
- **Pearls**
 - ✓ Represent revolutionary commercial advances using proven technical advances.
- **Oysters**
 - ✓ Involve technological breakthroughs with high commercial payoffs.
- **White elephants**
 - ✓ Projects that at one time showed promise but are no longer viable.

Course instructor: Dr. Nguyen Thi Duc Nguyen, School of Industrial Management, Ho Chi Minh City University of Technology
